# Preface

The article is designed to study financial anomalies

# 1 Introduction

Fama and MacBeth (1973) : Two-parameter risk-return regression equation is based in

$$x_{im} \equiv \frac{\text{total market value of all units of assets } i}{\text{total market value of all assets}} \text{ where asset } (i) \text{ in the portfolio } (m) \quad (1.1)$$

Equation 1 refers to the market equilibrium (market portfolio) is always efficient (Black (1972)).

Expected Return is given by Equation 1

$$E(\tilde{R}_i) = [E(\tilde{R}_m) - S_m \sigma(\tilde{R}_m)] + S_m \sigma(\tilde{R}_m) \beta_i, \text{ where } \beta_i \equiv \frac{\text{cov}(\tilde{R}_i, \tilde{R}_m)}{\sigma^2(\tilde{R}_m)} \quad (1.2)$$

## 2 Summary

In summary, this book has no content whatsoever.
