Preface

The article is desiged to study financial anomalies

1 Introduction

Fama and MacBeth (1973): Two-parameter risk-return regression equation is based in

$$x_{im} \equiv \frac{\text{total market value of all units of assets } i}{\text{total market value of all assets}}$$
where $\text{asset}(i)$ in the $\text{portfolio}(m)$

Equation 1 refers to the market equilibrium (market portflio) is always efficient (Black (1972)).

Excepted Return is given by Equation 1, β_i is the risk of the asset i of the portfolio m, measured relative to $\sigma^2(\tilde{R}_m)$

$$E(\tilde{R_i}) = \left[E(\tilde{R_m}) - S_m \sigma(\tilde{R_m})\right] + S_m \sigma(\tilde{R_m}) \beta_i, \tag{1.2}$$

where,
$$(1.3)$$

$$\beta_{i} \equiv \frac{cov(\tilde{R}_{i}, \tilde{R_{m}})}{\sigma^{2}(\tilde{R_{m}})} = \frac{\sigma_{j=1}^{N} x_{jm} \sigma_{ij}}{\sigma^{2}(\tilde{R_{m}})} = \frac{cov(\tilde{R}_{i}, \tilde{R_{m}}) \sigma(\tilde{R_{m}})}{\sigma(\tilde{R_{m}})}$$
(1.4)

2 Summary

In summary, this book has no content whatsoever.
